Common Mental Health Disorders

This profile has been developed to support the Mental Health Intelligence Network's aim to improve the health of communities by making data and information accessible.

The Common Mental Disorders profile presents all CCG level indicators contained within the Common Mental Health Disorders Profiling Tool: http://fingertips.phe.org.uk/profile-group/mental-health/profile/common-mental-disorders The tool provides commissioners, service providers, clinicians, services users and their families with the means to benchmark their area against similar populations and gain intelligence about what works.

Indicators are presented under the headings Risk and Related Factors, Prevalence, Services, Quality and Outcomes, and Finance.

Note: this profile presents CCG geography indicators only and therefore only shows part of the picture (in particular for Risk and Prevalence where many indicators are local authority based). To see all indicators please view the Common Mental Health Disorders Profiling Tool.
