Subject: Site Allocations Development Plan Document

Response of Tottenham & Wood Green Friends of the Earth to site allocation plan March 2015

SA22 – land north of Hornsey rail sidings

It is important that the development does really widen and enhance the ecological corridor of the New River.

SA32 St Ann's Hospital

As well as maintaining and improving the ecological corridor along the railway side of the site, opportunity should be taken to create a N-S corridor across the site, so linking to Chestnuts Park and hence to Downhills to form a North-South green corridor.

SA48 Hornsey Filter Beds

The filter beds formed an important ecological area – supporting large numbers of house martin and bats. Since the filter beds fell into disuse, they no longer provide the level of insects and hence feeding. It would be good if whatever development takes place does create some similar aquatic habitat that provides insects for bats and birds.

SA52 Pinkham Way

This site should be designated for nature conservation and plans put in train to manage it as such. Therefore it should have employment use removed from its designation. If development is allowed, it should maximise nature conservation value of the site, and retain the maximum size.

SA62 Barber Wilson

We welcome the proposed deculverting of Moselle
